

IMPACT CURTAIN SYSTEMS

# EvelTarp 1200 Series

## 1200N • 1200H • 1200HD

Patent-Pending Modular Impact Curtains  
Custom Length Impact Curtains for Full-Scale Facilities

*Harvard University Indoor Throws Facility*

*Engineered to stop the implement - not the thrower.*

## Built for Facilities That Throw Big

---

Every EvelTarp is conceived and designed by a career throws coach, born out of one question: how does one throw real implements indoors, safely, without damaging the facility? The 1200 series answers that question at full scale. Designed for universities, larger schools, sport facilities, clubs and sport equipment companies, each EvelTarp 1200 panel is 1.00m (40") wide and built to custom lengths, so the system reaches the heights of the biggest fieldhouses. Three builds cover every demand level — the nylon 1200N, the lightweight HMPE 1200H and the heavy-duty HMPE 1200HD. Panels link together so you build exactly the coverage your space needs.

### Why an EvelTarp?

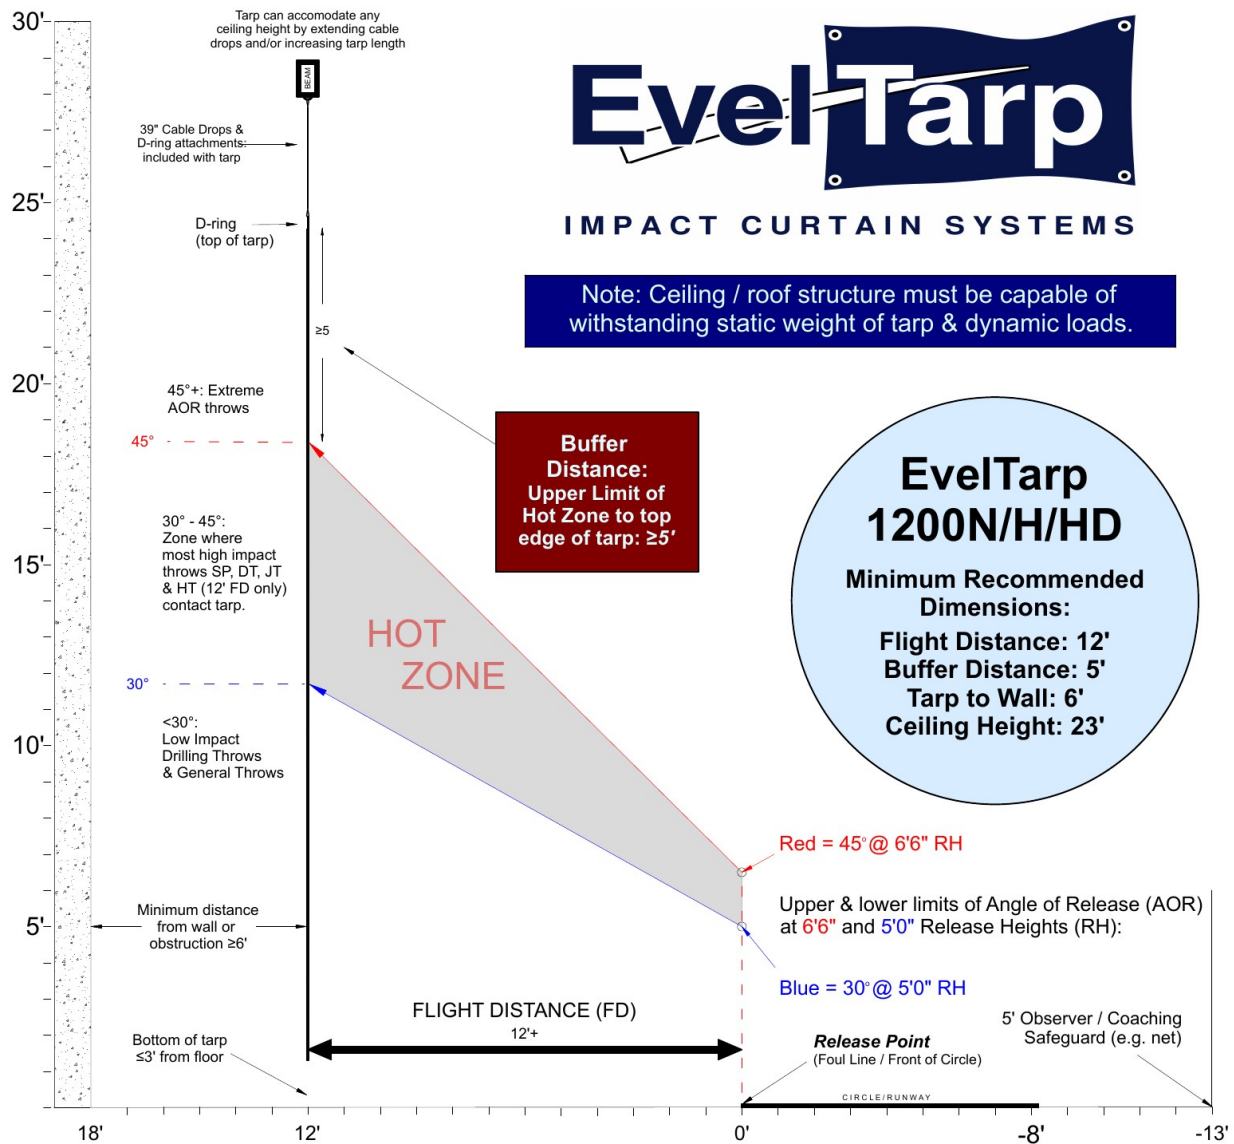

- **No bounce-back at the thrower.** When hung properly, the system absorbs incoming implements instead of deflecting or returning them. They simply fall to the ground. We solved the issue of implements travelling back toward the thrower — a safety problem most barriers simply don't address. This is the system's biggest asset from a safety and performance standpoint.
- **Built to survive actual hammers.** The EvelTarp stands up to repeated hammer impacts. We engineered for longevity where ordinary netting and tarps fail early.
- **Patent-pending system, patent-pending flap.** The entire system — including its integrated flap — is patent pending. The flap is central to how the tarp performs and how long it lasts.
- **Truly modular, truly flexible.** Because the panels are modular, the system allows for self-installation. Panels are easy to ship, quick to put up or take down, and simple to move, expand or reconfigure as your program needs change.

*25' 1200N panels*

## Planning Your Space

1200 series tarps are built to length for your facility. Use the guide to confirm the clearances your space provides before you order.

Dimensions are minimum hanging requirements. Every 1200 series tarp is sized to your facility — contact us and we will spec the system to your space.

## Three Models to Choose From

Here is a full breakdown of the 1200 series.

| MODEL                    | EvelTarp 1200N                                                                                                                                                                                                | EvelTarp 1200H                                                                       | EvelTarp 1200HD                                                                       |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Event Use                | SP, DT, JT, HT/WT                                                                                                                                                                                             |                                                                                      |                                                                                       |
| Application              | Universities, larger schools, sport facilities & clubs, companies and sport equipment suppliers — large clearances, full indoor throwing setups, outdoor applications, high performance & elite installations |                                                                                      |                                                                                       |
| Panel Length             | Custom — built to your facility                                                                                                                                                                               |                                                                                      |                                                                                       |
| Minimum Clearance Needed | None, we can accommodate any height                                                                                                                                                                           |                                                                                      |                                                                                       |
| Flight Distance          | 12'+                                                                                                                                                                                                          |                                                                                      |                                                                                       |
| Panel Width              | 100cm (40")                                                                                                                                                                                                   |                                                                                      |                                                                                       |
| Cable Drop Length        | 1.00m (40")                                                                                                                                                                                                   |                                                                                      |                                                                                       |
| Material                 | Nylon                                                                                                                                                                                                         | HMPE                                                                                 |                                                                                       |

## EvelTarp installations

We have installed an EvelTarp Impact Curtain System in some of the biggest athletic institutions, including:

Harvard University

University of Missouri

University of Iowa

University of Cincinnati

University of Kentucky

Montana State University

Montana Tech University

University of Wisconsin

University of Nebraska

IronWood Throws Center

Dalhousie University (Canada)

## Color options

The 1200N comes in black, white or standard colors — red and blue shown here, along with the full color range. Ordering colors carries an up-charge. The 1200H and 1200HD come in white only.

*Red*

*Blue*
